INTRODUCTION

In a nutshell, a search engine optimization footprint is a piece of code or a phrase that site scripts have. Over the years we have used **Search Engine Ranker** to create our backlinks and since UMD works tirelessly to build backlinks for you, we wanted to have more and more target sites where we could place a backlink pointing your sites.

Allow me to show you an example, presume a person produces a site about “dog training” and would like to start off a discussion board for its users to talk about regarding ideas about training dogs.

To be able to accomplish that, they need pick some sort of forum script to use, such as phpbb, vBulletin or others. The most typical seo footprint that you’ll see is the “Powered by...” footprint. In case the person utilizes the Vbulletin forum script, there is a footprint in all installations of Vbulletin, which is “Powered by Vbulletin” at the bottom of the forum.

As a result, when you search for “powered by Vbulletin” with Google, you’ll come across a huge amount of forums running on the phpbb script. Great thing for internet marketers just like us...

For each and every blogging script, commenting script, guestbook script, forum script, etc etc... you can always find a common footprint to search for. But you need not do any of the hardwork. Because I already collected a terrific list to get you started. When we combine these seo footprints with sophisticated search operators our keywords as well as some crafty thinking, they could be very powerful. Almost all of these footprints can be used with your own niche keyword(s) to return relevant results.

As we all understand, The search engines gives a lot more significance to niche relevant links and it’s simply a great way to dig much deeper in Google by using keywords. We use **Search Engine Ranker** for most of your backlinking tasks. UMD is fast and does most of the backlinking for your sites automatically and intelligently

Pro tip : For any Url Haresting and Scraping it is of utmost importance that you “SHOULD” always use **premium scraping proxies**. Without proxies scraping search engines your results are going to be very poor. No matter how good and targeted your footprints are, harvesting Search Engines without proxies is destined to yield very unsatisfactory results for you.
